

# Homework this week (due 10/16)

- SPI vs I2C speeds:
  - Figure out how to disable the VOC measurement on your BME680s. Turn off all `Serial.print` statements in loop except for an initial print announcing your intentions and a final one giving your result. Compare how long it takes to read the BME680 100 times using I2C and SPI. SPI is much faster, but only if your device's time to perform a measurement is small compared to the time to execute an I2C or SPI instruction.
