- (D, F)

Pseudocode for Kruskal's MST Algorithm	
1	KruskalMST(G) :
2	DisjointSets forest
3	foreach (Vertex v : G) :
4	forest.makeSet(v)
5	
6	PriorityQueue Q // min edge weight
7	foreach (Edge e : G) :
8	Q.insert(e)
9	
10	Graph T = (V, {})
11	
12	while  T.edges()  < n-1:
13	Vertex (u, v) = Q.removeMin()
14	if forest.find(u) == forest.find(v) :
15	T.addEdge(u, v)
16	forest.union( forest.find(u) ,
17	forest.find(v) )
18	
19	return T

### Kruskal's Running Time Analysis

We have multiple choices on which underlying data structure to use to build the Priority Queue used in Kruskal's Algorithm:

Priority Queue Implementations:	Heap	Sorted Array
<b>Building</b> : 6-8		
<b>Each removeMin</b> : 13		

Based on our algorithm choice:

Priority Queue Implementation:	Total Running Time
Heap	
Sorted Array	

### Reflections

Why would we prefer a Heap?

Why would be prefer a Sorted Array?

### Partition Property

Consider an arbitrary partition of the vertices on **G** into two subsets **U** and **V**.

Let **e** be an edge of minimum weight across the partition.

Then **e** is part of some minimum spanning tree.

*Proof in CS 374!*

## Partition Property Algorithm

## Prim's Minimum Spanning Tree Algorithm

### Pseudocode for Prim's MST Algorithm

```

1  PrimMST(G, s):
2  Input: G, Graph;
3         s, vertex in G, starting vertex of algorithm
4  Output: T, a minimum spanning tree (MST) of G
5
6  foreach (Vertex v : G):
7      d[v] = +inf
8      p[v] = NULL
9      d[s] = 0
10
11  PriorityQueue Q // min distance, defined by d[v]
12  Q.buildHeap(G.vertices())
13  Graph T // "labeled set"
14
15  repeat n times:
16      Vertex m = Q.removeMin()
17      T.add(m)
18      foreach (Vertex v : neighbors of m not in T):
19          if cost(v, m) < d[v]:
20              d[v] = cost(v, m)
21              p[v] = m
22
23  return T
    
```

## Running Time of MST Algorithms

Kruskal's Algorithm:

Prim's Algorithm:

**Q:** What must be true about the connectivity of a graph when running an MST algorithm?

...what does this imply about the relationship between **n** and **m**?

	Adj. Matrix	Adj. List
Heap		
Unsorted Array		

### CS 225 – Things To Be Doing:

- Programming Exam C is different than usual schedule:**  
Exam: Sunday, Dec 2 – Tuesday, Dec 4
- MP7 Released – Slightly different structure:**  
Hard Deadline on Monday, Dec. 3 for Part 1
- lab\_ml in lab this week!
- Daily POTDs are ongoing for +1 point /problem
