

A New Data Structure Arrives:

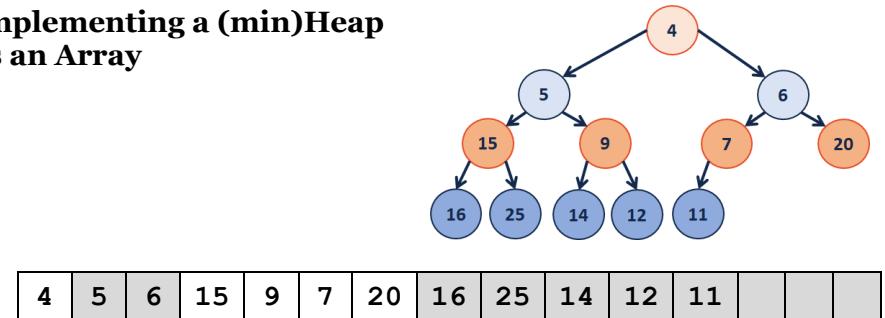

ADT:
 insert
 remove
 isEmpty

Implementation of _____

insert	removeMin	Implementation
O(n)	O(n)	Unsorted Array
O(1)	O(n)	Unsorted List
O(lg(n))	O(1)	Sorted Array
O(lg(n))	O(1)	Sorted List

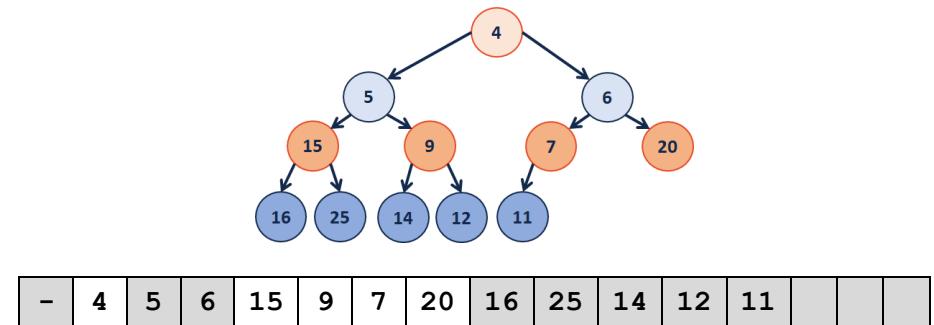

Q1: What errors exist in this table? (Fix them!)

Q2: Which algorithm would we use?

**Implementing a (min)Heap
as an Array**

Operations:
 leftChild(index) :=

rightChild(index) :=
 parent(index) :=

Inserting into a Heap

...running time?

```

Heap.hpp (partial)

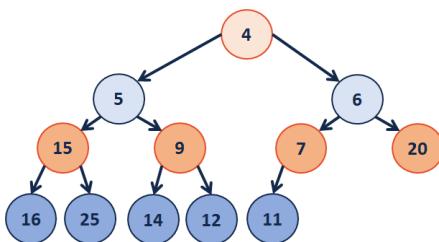

1 template <class T>
2 void Heap<T>::_insert(const T & key) {
3     // Check to ensure there's space to insert an element
4     // ...if not, grow the array
5     if ( size_ == capacity_ ) { _growArray(); }
6
7     // Insert the new element at the end of the array
8     item_[++size_] = key;
9
10    // Restore the heap property
11    _heapifyUp(size);
12 }

13 template <class T>
14 void Heap<T>::_heapifyUp( _____ ) {
15     if ( index > _____ ) {
16         if ( item_[index] < item_[parent(index)] ) {
17             std::swap( item_[index], item_[parent(index)] )
18         };
19         _heapifyUp( _____ );
20     }
21 }

```

What's wrong with this code?

Heap Operation: removeMin / heapifyDown:

-	4	5	6	15	9	7	20	16	25	14	12	11			
---	---	---	---	----	---	---	----	----	----	----	----	----	--	--	--

```

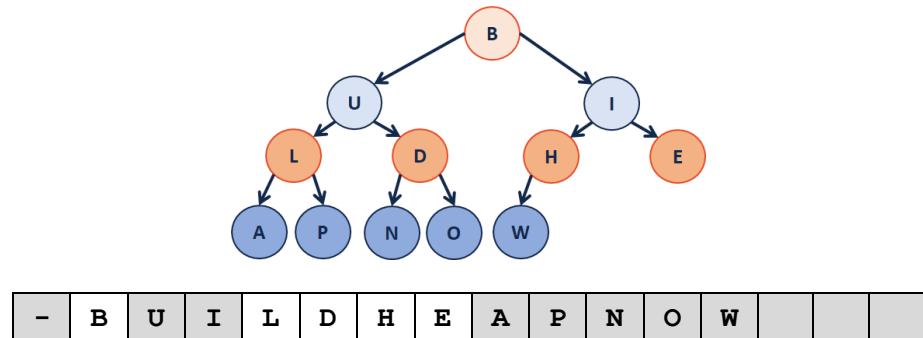

Heap.hpp (partial)

1 template <class T>
2 void Heap<T>::_removeMin() {
3     // Swap with the last value
4     T minValue = item_[1];
5     item_[1] = item_[size_];
6     size--;
7
8     // Restore the heap property
9     heapifyDown();
10
11    // Return the minimum value
12    return minValue;
13 }

14 template <class T>
15 void Heap<T>::_heapifyDown(int index) {
16     if ( !isLeaf(index) ) {
17         T minChildIndex = _minChild(index);
18         if ( item_[index] > item_[minChildIndex] ) {
19             std::swap( item_[index], item_[minChildIndex] );
20             _heapifyDown( _____ );
21         }
22     }
23 }

```

Q: How do we construct a heap given data?
