Probability and Statistics 7 for Computer Science

Can we call e the Can we can
exciting e ?

$$
e = \lim_{n \to \infty} \left(1 + \frac{1}{n} \right)^n
$$

Objectives

Exponential distribution

$*$ Normal (Gaussian) distribution

Exponential distribution

- ✺ Common Model for waiting time
- ✺ Associated with the Poisson distribution with the same **λ**

$$
p(x) = \lambda e^{-\lambda x} \quad \text{for } x \ge 0
$$

Exponential distribution

 $*$ A continuous random variable X is exponential if it represent the "time" until next incident in a Poisson distribution with intensity **λ**. Proof See Degroot et al Pg 324.

$$
p(x) = \lambda e^{-\lambda x} \quad \text{for } x \ge 0
$$

 $*$ **It's similar to Geometric distribution** – the discrete version of waiting in queue

Expectations of Exponential distribution

 $*$ A continuous random variable X is exponential if it represent the "time" until next incident in a Poisson distribution with intensity λ .

$$
p(x) = \lambda e^{-\lambda x} \quad \text{for } x \ge 0
$$

$$
E[X] = \frac{1}{\lambda} \& var[X] = \frac{1}{\lambda^2}
$$

Example of exponential distribution

 $*$ How long will it take until the next call to be received by a call center? Suppose it's a random variable **T**. If the number of incoming call is a Poisson distribution with intensity λ = **20 in an hour.** What is the expected time for T?

Q:

✺ A store has a number of customers coming on Sat. that can be modeled as a Poisson distribution. In order to measure the average rate of customers in the day, the staff recorded the time between the arrival of customers, can he reach the same goal?

A. Yes B. No

Normal (Gaussian) distribution

 $*$ The most famous continuous random variable distribution. The probability density is this:

$$
p(x) = \frac{1}{\sigma\sqrt{2\pi}}exp(-\frac{(x-\mu)^2}{2\sigma^2})
$$

Carl F. Gauss (1777-1855) Credit: wikipedia

Normal (Gaussian) distribution

 $*$ The most famous continuous random variable distribution. The probability density is this:

$$
p(x) = \frac{1}{\sigma\sqrt{2\pi}}exp(-\frac{(x-\mu)^2}{2\sigma^2})
$$

$$
E[X] =
$$
\nCarl F. Gauss (1777-1855)

\nCardit: wikipedia

$$
E[X] = \mu \& var[X] = \sigma^2
$$

Normal (Gaussian) distribution

 $*$ The most famous continuous random variable distribution.

$$
p(x) = \frac{1}{\sigma\sqrt{2\pi}} exp(-\frac{(x-\mu)^2}{2\sigma^2})
$$

$$
\int_{-\infty}^{+\infty} p(x)dx = 1
$$

$$
E[X] = \mu \& var[X] = \sigma^2
$$

Carl F. Gauss (1777-1855) Credit: wikipedia

Normal (Gaussian) distribution

✺ A lot of data in nature are approximately normally distributed, ie. **Adult height**, etc.

$$
p(x) = \frac{1}{\sigma\sqrt{2\pi}}exp(-\frac{(x-\mu)^2}{2\sigma^2})
$$

$$
\begin{array}{c}\n\begin{pmatrix}\n\circ & \circ \\
\circ & \circ \\
\circ & \circ\n\end{pmatrix}\n\end{array}
$$

$$
E[X] = \mu \& var[X] = \sigma^2
$$

rl F. Gauss (1777-1855) edit: wikipedia

PDF and CDF of normal distribution curves

Spread of normal (Gaussian) distributed data

Standard normal distribution

- $*$ If we standardize the normal distribution (by subtracting μ and dividing by σ), we get a random variable that has standard normal distribution.
- $*$ A continuous random variable X is standard **normal** if

$$
p(x) = \frac{1}{\sqrt{2\pi}} \exp(-\frac{x^2}{2})
$$

Derivation of standard normal distribution

Q. What is the mean of standard normal?

A. 0 B. 1

Q. What is the standard deviation of standard normal?

A. 0 B. 1

Standard normal distribution

- $*$ If we standardize the normal distribution (by subtracting μ and dividing by σ), we get a random variable that has standard normal distribution.
- $*$ A continuous random variable X is standard **normal** if

$$
p(x) = \frac{1}{\sqrt{2\pi}} \exp\left(-\frac{x^2}{2}\right)
$$

$$
E[X] = 0 \& \operatorname{var}[X] = 1
$$

Another way to check the spread of normal distributed data

[∗] Fraction of normal data within 1 standard deviation from the mean.

$$
\frac{1}{\sqrt{2\pi}} \int_{-1}^{1} \exp(-\frac{x^2}{2}) dx \simeq 0.68
$$

Exaction of normal data within k standard deviations from the mean.

$$
\frac{1}{\sqrt{2\pi}} \int_{-k}^{k} \exp\left(-\frac{x^2}{2}\right) dx
$$

Using the standard normal's table to calculate for a normal distribution's probability

■ If $X \sim N$ (μ=3, σ²=16) (normal distribution)

 $P(X \leq 5) = ?$

■ If $X \sim N$ (μ=3, σ² = 16) (normal distribution) $P(X \le 5) = ?$ A. 0.5199 B. 0.5987 C. 0.6915

Q. Is the table with only positive x values enough?

A. Yes B. No.

Central limit theorem (CLT)

- **EXECT** The distribution of the sum of N independent identical (IID) random variables tends toward a **normal** distribution as $N -$ ∞
- ✺ Even when the component random variables are not exactly IID, the result is approximately true and very useful in practice

Central limit theorem (CLT)

- ✺ CLT helps explain the prevalence of normal distributions in nature
- ✺ A binomial random variable tends toward a normal distribution when N is large due to the fact it is the sum of IID Bernoulli random variables

The Binomial distributed beads of the **Galton Board**

The **Binomial** distribution looks very similar to Normal when N is large

Binomial approximation with Normal

Binomial approximation with Normal

- $*$ Let k be the number of heads appeared in 40 tosses of fair coin
- $E[k] = np = 40 \cdot 0.5 = 20$ $P(10 \le k \le 25) = \sum$ 25 $k=10$ $/40$ \overline{k} \setminus $0.5^{k}0.5^{40-k}$ $=$ \sum 25 $k=10$ $/40$ k \setminus $0.5^{40} \simeq 0.96$ $\frac{std[k] = \sqrt{np(1-p)}}{\sqrt{100005}}$ $= \sqrt{40 \cdot 0.5 \cdot 0.5} = \sqrt{}$ 10 $*$ The goal is to estimate the following with normal

Binomial approximation with Normal

- Use the same mean and standard deviation of the original binomial distribution. $\mu = 20$ $\sigma = \sqrt{10} \approx 3.16$
- $*$ Then standardize the normal to do the calculation

$$
P(10 \le k \le 25) \simeq \frac{1}{\sigma\sqrt{2\pi}} \int_{10}^{25} exp(-\frac{(x-\mu)^2}{2\sigma^2}) dx
$$

= $\frac{1}{\sqrt{2\pi}} \int_{\frac{10-20}{3.16}}^{\frac{25-20}{3.16}} exp(-\frac{x^2}{2}) dx$
\simeq 0.94

Assignments this week

- ✺ Week 6 quiz
- ✺ HW5
- ✺ Prepare for Midterm1:
	- $*$ Practice exams
	- [☀] Read through instructions on Compass
