# How To Convey the Guarantees of TLS in UI

Grab paper and pen

Draw a full-page connection security indicator

# What was missing in our design process?

Measurement of current state

Actual user input to identify helpful changes

Measurement of success after change is made

## Research Question

How can we improve connection security indicators?

## Research Question

What were their goals?

How do we know when connection security indicators are 'improved'?

## Research Question

Was it the right question?

#### Problems to Be Solved

How to measure current security indicator effectiveness

How to improve connection security indicators

Measure effectiveness after deployment

## **Historical Indicators**

| Browser           | HTTPS           | HTTPS<br>minor error | HTTPS<br>major error | HTTP        | EV             | Malware              |
|-------------------|-----------------|----------------------|----------------------|-------------|----------------|----------------------|

## **Text Selection**

"secure"

"https"

"not secure"

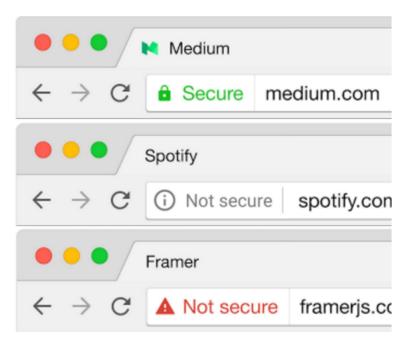

Figure 4: Proposed connection security indicators.

# Why Does Chrome Not Use These Indicators Today?

What changed?

## Why Does Chrome Not Use These Indicators?

| Users should expect that the web is safe by default, and they'll be warned when there's |                          |  |  |  |  |  |
|---|--------------------------|--|--|--|--|--|
| an issue. Since we'll soon start marking all HTTP pages as "not secure", we'll step     |                          |  |  |  |  |  |
| towards removing Chrome's positive security indicators so that the default unmarked     |                          |  |  |  |  |  |
| state is secure. Chrome will roll this out over time, starting by removing the "Secure" |                          |  |  |  |  |  |
| wording and HTTPS scheme in September 2018 (Chrome 69).                                 |                          |  |  |  |  |  |
|   |                          |  |  |  |  |  |
|   |                          |  |  |  |  |  |
|   | Treatment of LITTPO name |  |  |  |  |  |
|   | Treatment of HTTPS pages |  |  |  |  |  |
| Current (Chrome 67)   | ■ Secure   example.com   |  |  |  |  |  |
|   |                          |  |  |  |  |  |
| Sep. 2018 (Chrome 69)   |                          |  |  |  |  |  |
| Eventually  | example.com              |  |  |  |  |  |
| Zromadny  | Champiosom               |  |  |  |  |  |
