$$h = \sigma(\xi), \quad \xi = 1, \quad h = 0.73,$$

$$\frac{dI}{dh} = 5. \quad \text{What is } \frac{dI}{d\xi}?$$

Note: $\left[\frac{d\sigma(\xi)}{d\xi} = \sigma(\xi)(1 - \sigma(\xi)) = h(1 - h) \right]$

$$\frac{dI}{d\xi} = \frac{dI}{dh} \frac{dh}{d\xi} = 5 \cdot (0.73)(1 - 0.73)$$
