

Subject: Physics 101: Welcome

Good morning,

You are receiving this email because you are enrolled in Physics 101 for the Spring 2024 semester.

As you get ready for the semester to begin, please visit (and bookmark) the [Physics 101 website](#), where you will find what you need to know about **class meetings**, **online assignments**, and **action items** for Week 1 of the semester. Additionally, I highly recommend reviewing the following parts of the course website:

- [What you need to do to be ready for each part of class](#)
- [What you should do about course attendance if you are sick](#)
- An overview of the [course structure](#), [grading policies](#), and [attendance policy](#)
- A list of [required materials](#) for the course, including iclickers, the IOLab data acquisition device, and website services we will be using
- The [schedule](#) for the semester, including dates for lectures, discussions, labs, homework assignments, and exams (all exam dates are set except for the final)

A video summary of some of the key points about Physics 101 and our policies is available on the [course mediaspace channel](#). I'll also review the main points of how the class works during Lecture 1 on Wednesday.

I hope you had a nice and possibly even relaxing winter break and look forward to our semester in Physics 101 together.

On behalf of the Physics 101 teaching team,

KATIE ANSELL

Teaching Assistant Professor in Physics

The Grainger College of Engineering

Physics Education Research
