

Physics 403 Modern Physics Laboratory

<http://online.physics.uiuc.edu/courses/phys403/spring12>

403 Staff

Instructors:

Eugene V Colla (kolla@illinois.edu)

Robert M Clegg (rclegg@illinois.edu)

TA's:

Kyle D McQuaid (mcquaid2@illinois.edu)

Daniel S Jumper (jumper1@illinois.edu)

Laboratory Specialist:

Jack Boparai (jboparai@illinois.edu)

Support from research groups:

Grosse Perdekamp & Kwiat groups

Ferroelectric domains in BaTiO₃

Spin-precession of stopped cosmic ray muons

Outline

- Goals of the course
- Teamwork / grades / expectations from you
- Syllabus and schedule
- Your working mode
 - In class and “after hours” access
 - Safety, Responsibility
 - Home and away computing
 - In-class workstations and laptops
 - Downloads for home
- A brief physics primer of things to come → take a tour !
- Let's get started
 - electronic logbooks
 - digital scopes

12/08/2010

Course Goals

- Primary goal: Learn how to “do” research
 - Each project is a mini-research effort
 - How are experiments actually carried out ?
 - The procedures aren't all written out
 - The questions are not in the back of the chapter
 - The answers are not in the back of the book
 - You will have to learn to guide your own activities
 - Use of modern tools and modern analysis and data-recording techniques
 - Learn how to document your work
 - Online, as you go in paper and electronic logbooks, data files, etc.
 - At intermediate summary points
(e.g. completion of setup or calibration measurements, daily summary, etc.)
 - Making an analysis report
 - Presenting your findings orally
 - Writing formal reports

Course Goals

- Secondary goal: Learn some modern physics
 - Many experiments were once Nobel-prize-worthy efforts
 - They touch on important themes in the development of modern physics
 - Some will provide additional insight to understand advanced courses you have taken
 - Some are just too new to be discussed in textbooks

The Experiment

- Nuclear / Particle (NP)
 - Alpha particle range in gasses
 - Cosmic ray muons:
Lifetime, capture rate, magnetic moment
 - Angular correlations in nuclear decay
 - Angular distribution of cosmic rays

The Experiments

- Condensed Matter (CM)
 - Superconductivity
 - Tunneling in superconductors
 - 2nd sound in ⁴He superfluid state
 - Ferroelectrics and ferroelectric
 - phase transition
 - Pulsed NMR
 - Calibration of temperature sensors
 - Special Tools:
 - Vacuum film deposition
 - Atomic Force Microscope
 - Polarizing microscope

The Experiments

- Atomic / Molecular / Optics

- Optical pumping of rubidium gas

- Berry's phase

- Quantum erasure

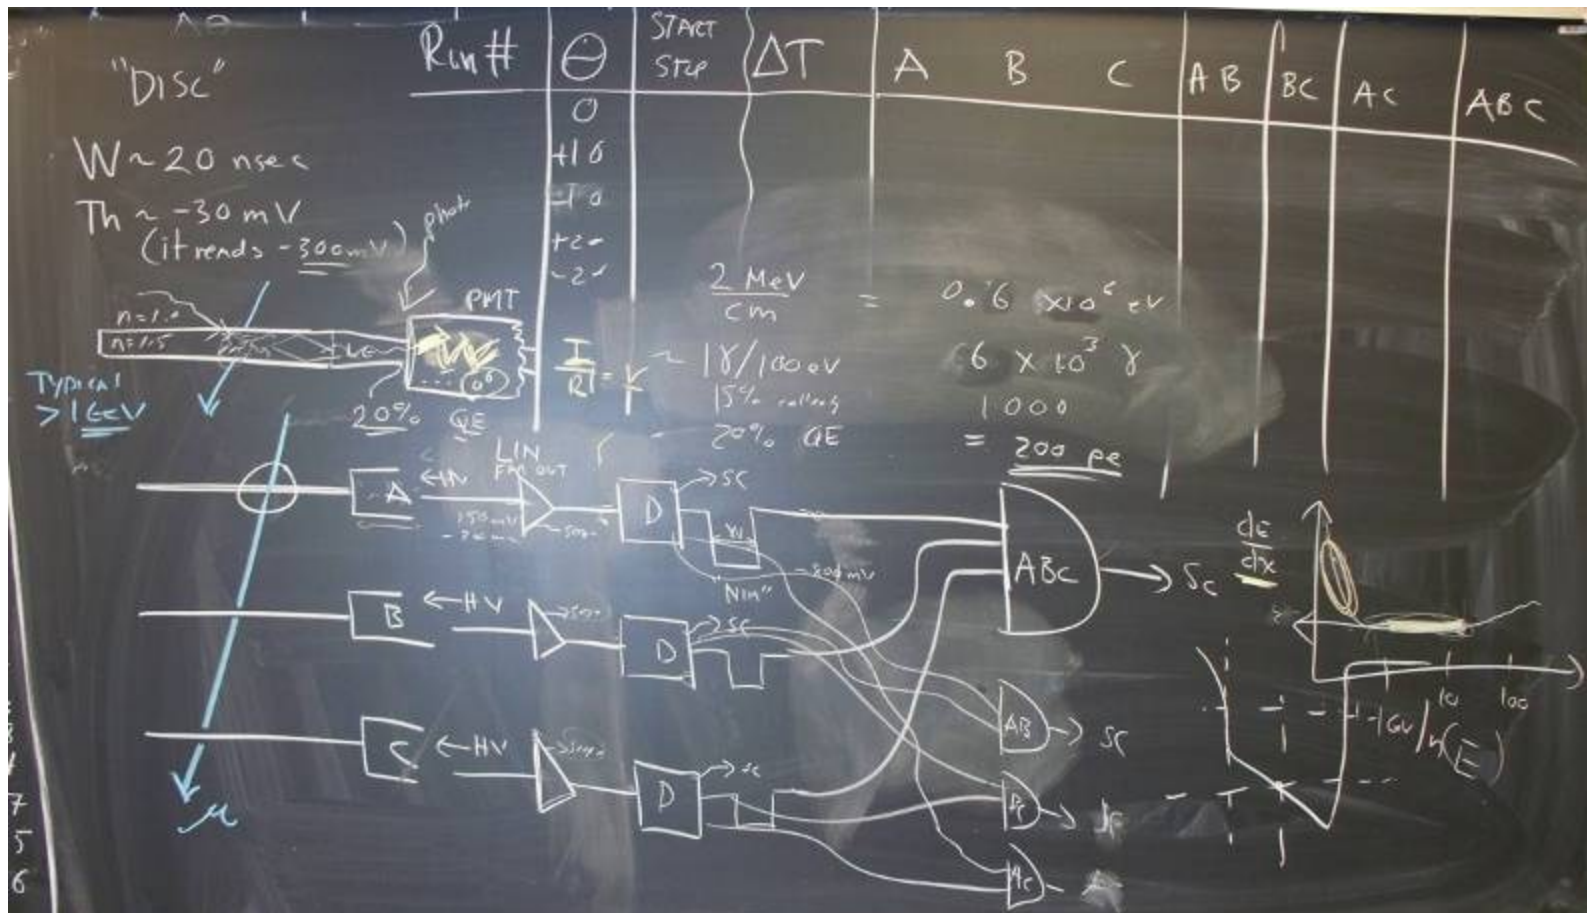

- Quantum Entanglement

- Fluorescence spectroscopy

The “manuals”

- Many are just guides
- A few purchased experiments have “real” manuals
- We serve as your guides ... like real research

Grading: Distribution of “1000” points

spring 2012

Item	Points
Expt. documentation: elog reports, shift summaries, plot quality; paper logbooks	180 Total 60 / cycle
Formal reports: physics case, quality of results, depth of analysis, conclusions	600 Total 100 / report
Oral reports: motivation, organization of presentation; fielding questions	225 75 / oral
Total	1005
Effective point total will be	1000 ← grade

The grading scale will be a percentage out of “1000” :

Letter grading scale is approximately 97% = A+, 93% = A, 90% = A-, 87% = B+, 83% = B, 80% = B-, etc. but done each semester based on overall class work, distribution, etc. You will not get below these, but possibly better than these boundaries.

You can **RESUBMIT one lab report** to improve your grade (deadline for resubmissions May, 3 – reading day).

Submission of Lab-Reports

- Due dates as on syllabus at midnight
- Submission via e-mail to both Eugene and Bob
- Accepted MS-Word or PDF

Absences / Late Reports

- If you are sick, let Eugene or/and Bob know by email. Don't come in and get others sick. We are working side-by-side in a close environment for many hours.
- You can “make up” the time with arrangements as Eugene is in the lab most of the time and you can have access to the rooms. We will be accommodating.
- Policy for late reports
 - You can have **ONE “late ticket” for a “free”** delay of up to **3** days, but you must tell us you are using the ticket! We suggest saving it as long as possible since something might come up you don't now expect.
 - Reports are due at midnight on the date shown on the syllabus. After that we will charge:
 - 5 points for up to 1 week late. 10 points for up to 2 weeks late.
 - After that, it's too late.

Syllabus

Cycles

Class	Date	Day	Activity	Comment	Due	Note
1	1/17	Tues	Orientation	About Phy403 (ec)		
2	1/19	Thurs	Cycle 1-1			
3	1/24	Tues	Cycle 1-2	OriginPro Intro (ec)		
4	1/26	Thurs	Cycle 1-3	Elog Coments (ec)		
5	1/31	Tues	Cycle 1-4	Written Reports (ec)		
6	2/2	Thurs	Cycle 1-5		Rotate	
7	2/7	Tues	Cycle 1-6	Data, errors and noise (bc)		
8	2/9	Thurs	Cycle 1-7		C1-Ex1	
9	2/14	Tues	Cycle 1-8	Oral Reports / Talks (ec)		
10	2/16	Thurs	Cycle 2-1		Rotate	
11	2/21	Tues		ORALS Cycle 1		
12	2/23	Thurs	Cycle 2-2			
13	2/28	Tues	Cycle 2-3	optical spectroscopy (bc)	C1-Ex2	
14	3/1	Thurs	Cycle 2-4			
15	3/6	Tues	Cycle 2-5	Data & Ethics (bc)	Rotate	
16	3/8	Thurs	Cycle 2-6			
17	3/13	Tues	Cycle 2-7	Lock-in Amps and FT(ec/bc)	C2-Ex1	
18	3/15	Thurs	Cycle 2-8			
				SPRING BREAK		
19	3/27	Tues		ORALS Cycle 2		
20	3/29	Thurs	Cycle 3-1		Rotate	
21	4/3	Tues	Cycle 3-2	Measuring Temp (ec)	C2-Ex2	
22	4/5	Thurs	Cycle 3-3			
23	4/10	Tues	Cycle 3-4	Ferroelectricity (ec)		
24	4/12	Thurs	Cycle 3-5		Rotate	
25	4/17	Tues	Cycle 3-6	High Energy Physics & LHC (mgp)	C3-Ex1	
26	4/19	Thurs	Cycle 3-7			
27	4/24	Tues	Cycle 3-8	Entanglement		
28	4/26	Thurs		Working Day / Catchup		
29	5/1	Tues		ORALS Cycle 3		
	5/3			READING DAY	C3-Ex2	

Assignment of experiments: 3 cycles with 2 experiments

→ teams change after each cycle

→ joint team reports and oral presentations

	Nuclear / Particle A. Cosmic Muon Stand i. Muon lifetime ii. Capture rate iii. Magnetic moment B. Alpha range C. Gamma Gamma D. Cosmic angular distribution Daniel	Condensed Matter A. Ferro 1 B. Ferro 2 (imaging) C. 2 nd sound of ⁴ He D. pNMR E. Hysteresis loops F. Tunneling Eugene	Atomic + CM A. Optical pumping B. Superconductivity C. Mutual inductance Eugene + Kyle	Optics A. Quantum Table i. Berry's phase ii. Quantum erasure iii. Entanglement B. Florescence spectroscopy Bob, TA from Kwiat group
C1-1	1,2	3,4	5,6	7(A), 8(B)
C1-2	7,8	3,4	1,2	5,6(B)
C2-1	4,5	6,7	3,8	1,(B) 2(A)
C2-2	2,5	1,7	6,8	4,3(B)
C3-1	1,7	6,8 2,5	3,	4,(A)
C3-2	6 3,8	5	1,4	2,7(B)

assignments for different experimenters

Name	#	Part	NP	CM-1	Atomic / CM-2	Optics
Student #1						
Student#2						
Student#3						
...						

Safety is your responsibility !

Hazards: *high voltage, radioactive sources, cryogens, chemical materials*

In class work and “after hours” access & work requires responsible conduct with regards to

- (I) safety/hazards and with**
- (II) equipment**

Discuss potential hazards at the beginning of each experiment with an instructor or TA

Save conduct during experiments

When in doubt stop and ask

**Problems after hours: 217 898 9766 (Bob' cell)
217 493 1576 (Eugene's cell)**

How to record data (1)

- Work together
- Write down the equipment used
- Make a diagram of the setup
- Note the settings of dials, switches, gauges
- Take a digital photo if appropriate
- Use a software drawing program to make a detailed sketch
- You will almost always look at some signals with a scope.
 - Record a representative trace using the Scope interface.
- When you have come to an intermediate stopping point, take a few minutes and summarize the recent steps
 - Use the eLog (see next).
 - Write down what you did in real sentences.
 - Provide enough detail that you can reconstruct later what you did!
- Plan your plots and analysis as you go.
 - How will you look at the data later?
 - Do you have enough information?
 - Did the equipment perform as expected?

How to record data (2)

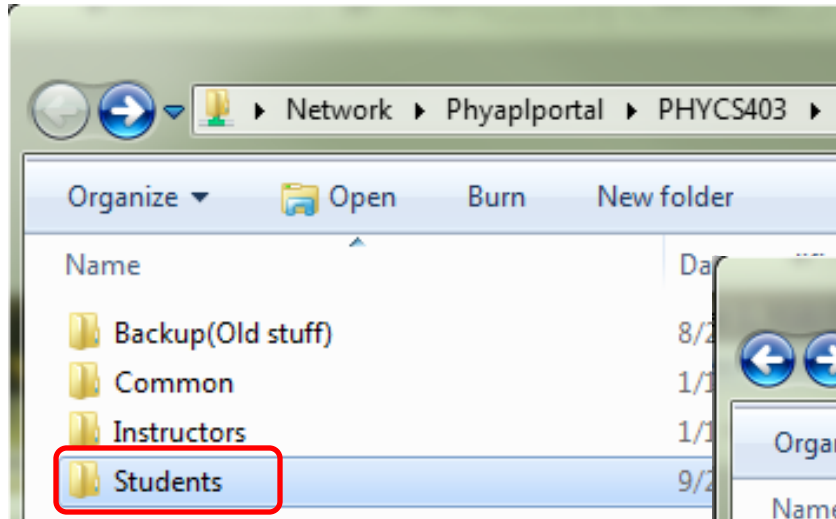

- Many experiments require you to “change and measure” something by hand
 - Make a table in a paper logbook for this
 - Double check points periodically to establish reliability
 - Be prepared to state your measurement uncertainty
 - Make a “quick sketch” of your results by hand; then, enter the data in an electronic table and make a final plot
 - Do you have enough points?
 - Do you have any obvious anomalies?
 - You can repeat points but do not throw them out. Use other measurements to check reliability

How to record data (3)

- Many experiments have built-in, computer-based data acquisition (DAQ)
 - You will not have time to fully understand the DAQ, but
 - Be sure you know functionally what it is doing – ask
 - A good idea is to make test measurements of something you know
 - Because it's “automatic” don't be fooled into thinking it's “correct.” You have the burden of overseeing this acquisition, even if the computer is doing the work.
 - As before, anomalies? enough points? uncertainties?
 - You will often get a built-in “online” plot of the results. Don't think that is the end of the game. But, look at the results !

Where to exchange, store and retrieve course information. (i) *Your data, projects, tables etc*

- **\\Phyapportal\physcs403**

Make your own folder and put your work there

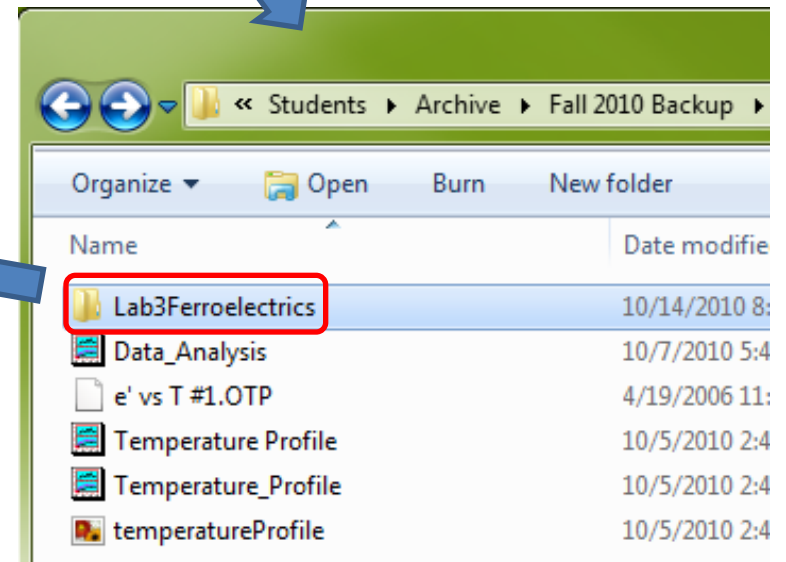

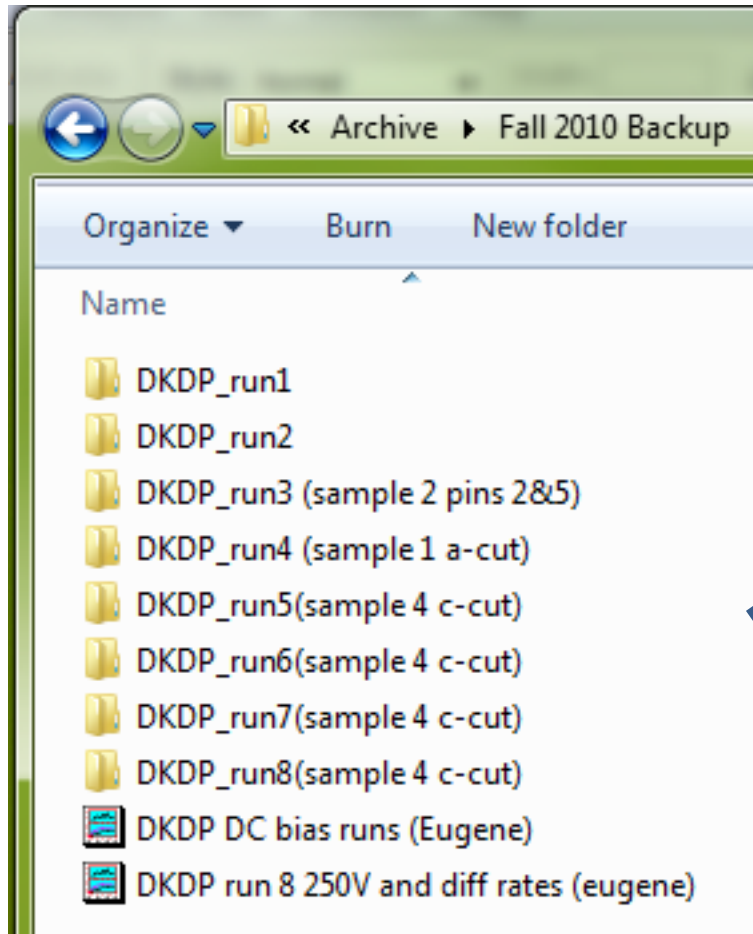

Store all experiment related materials in corresponding folder

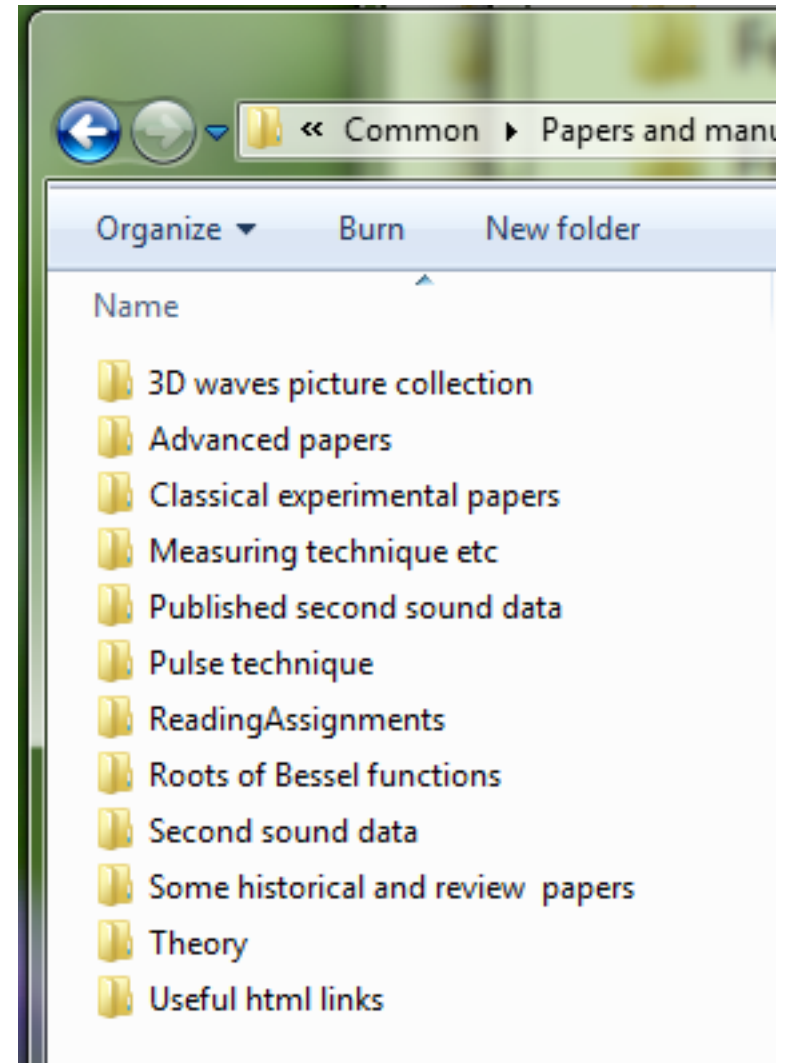

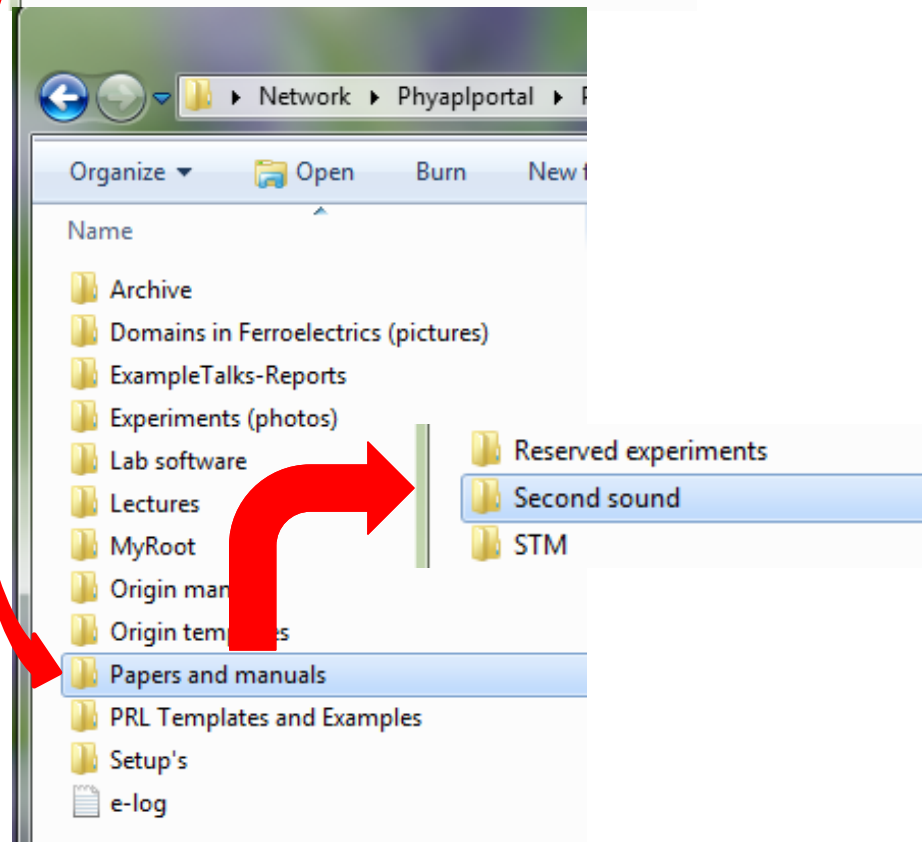

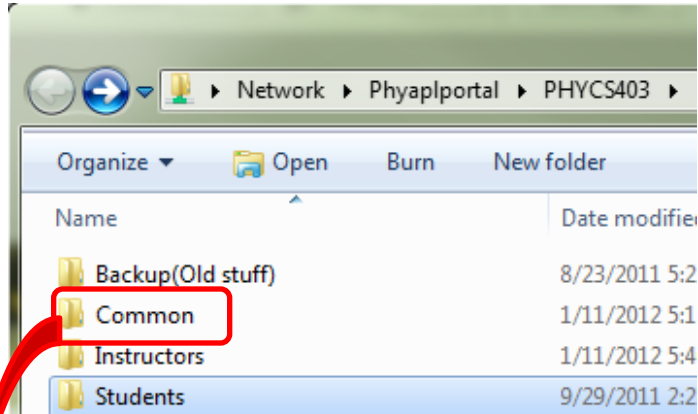

Where to exchange, store and retrieve course information. (i) *Your data, projects, tables etc*

An example of the “smart” structure of folders containing the raw data and data analysis projects

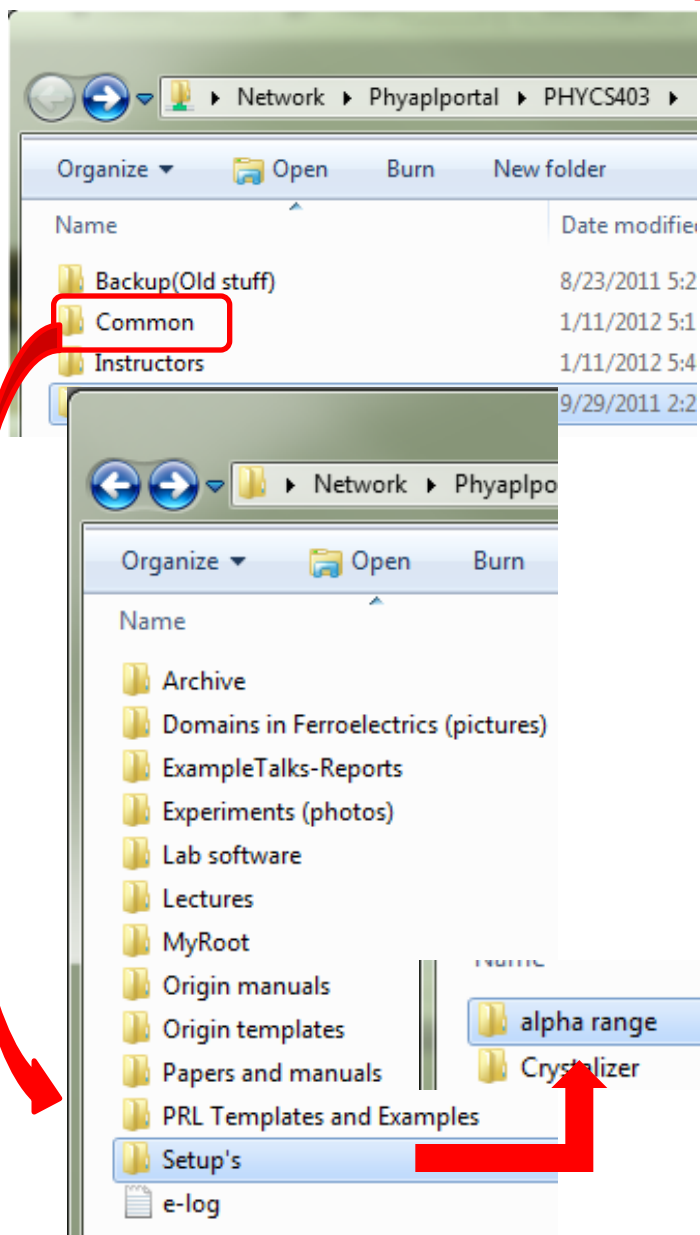

Where to retrieve course information.

Manuals, papers, setup diagrams and other useful materials

Where to retrieve course information.

Manuals, papers, *setup diagrams* and other useful materials

α-range experiment setup diagram

Where to retrieve course information.

Manuals, papers, setup diagrams and *other useful materials*

The image shows a Windows file explorer window with a folder named 'Common' selected. A red arrow points from 'Common' to a list of folders. Red arrows also point from specific folders to yellow text boxes on the right, which describe the contents of those folders.

Folder Name	Description
Archive	Some old stuff (not very useful)
Domains in Ferroelectrics (pictures)	Sample pictures of ferroelectric domains
ExampleTalks-Reports	Examples of report and oral presentation
Experiments (photos)	Pictures of the setups of the experiments
Lab software	Software including DAQ software for different experiments. Newest version of Origin is also there
Lectures	P403 lecture notes
MyRoot	C++ scripts for Root
Origin manuals	Origin manuals + a very compressed version written by Eugene
Origin templates	
Papers and manuals	Origin templates (how to use them will be discussed in next lecture)
PRL Templates and Examples	
Setup's	
e-log	

“Journal club”

This is a new proposed activity for Physic 403 course
and it will be presented by Professor **Robert Clegg**

<http://ajp.aapt.org/#mainWithRight>

<http://www.nature.com/nature/index.htm>

<http://www.scientificamerican.com/>

<http://publish.aps.org>
or <http://prola.aps.org/>

e-logs: First a brief tour ...

[*http://www.npl.illinois.edu/elog/modphys/*](http://www.npl.illinois.edu/elog/modphys/)

How to use it

- **Pause and summarize your work at natural stopping points in the action. This is useful for particular findings and measurement sequences.**
- **Along the way, save data, plots, scope shots to a temporary folder on your desktop.**
- **Near the end of the class, make a “**Shift Summary**” providing a rather complete overview of the highlights of your work. There, you can upload your plots, scope shots, etc. and describe the data**

Entering the e-Log ...

(at this point, you need to work on a computer)

Registering as a new user

- Go to

<http://www.npl.illinois.edu/elog/modphys/Modern+Physics+Laboratory+Fall+2011+Semester/>

- Click "[Register as new user](#)" on the bottom right

- Fill in information for login name, Full Name, e-mail address, and password
PASSWORD IS NOT SECURE, DO NOT USE A "SENSITIVE" PASSWORD

- Click "Save" in the upper left hand corner

e-logs: About using it ...

- Navigating the E-Log
- The e-log user guide can be found at <http://midas.psi.ch/elog/userguide.html>
- The Main Page
 - The main page shows a summary of the last 100 entries in reverse order (newest at top).
 - ID, Date, Author, Experiment, Post Type, or Subject can be clicked to sort by that category.
 - Full | Summary | Threaded change the way the main page is shown (default is Summary).
 - The menu bar contains several options:
 - New: Create a new post
 - Find: Search for a post
 - Login: Login as a new different user
 - Logout: Logout the current user
 - Help: As simple help page (not very useful)
 - HelpELCode: A help page on using the E-Log code when making posts

e-logs: Making a post ...

- **Create a New Post**
- **To create a new post, click "New" from the menu bar.**
- **Fill in the Author, Experiment, Post Type, and Subject**
 - **If the post is written by more than one person, use a comma separated list.**
 - **Be sure the Author name is the same you used when registering so that you can edit/delete the post if necessary.**
 - **If you need a new Experiment or Post Type, click the button "Add Experiment" or "Add Post Type".**
The large blank area is for the Text portion of the post

e-logs: Making a post ...

- Towards the button is the Encoding option.
"ELCode" translates the post using E-Log code, refer here for instructions on it's use.
 - "plain" makes the post in plain text with no formatting.
 - "HTML" translates the post according to HTML standards.
 - Attachments can be made in the attachment section.
 - Any file less than 10MB can be attached to the post.
 - Certain file types such as png, jpeg, gif, and txt will be shown at the bottom of the post.
 - To display figures in-line, see the ELCode Help Page
- When finished click "Submit"
- The "Suppress Email notification" box can be unchecked if you would like the entire class to receive an e-mail informing them that your post has been submitted. In general, leave this box checked.

Analyzing Data with *ORIGIN* or *ROOT*

- We aim to point you toward two powerful, professional analysis tools:
- **ORIGIN** (commercial; CM, AMO, bio, ...)

– Motivations

- Very powerful and flexible
 - No necessary to have experience with C++
 - It's also free for you ; current available version is Origin Pro v. 8.6
- **ROOT** (CERN + users; nuclear, particle physics)

– Motivations

- Fantastically flexible
- Outputs pub-quality plots in any format
- Relatively easy to do complex tasks, like non-linear least-squares fitting, Monte-Carlo, etc.
- World community of users contributing
- IT'S FREE ! You can download the whole thing to your PC under Linux, Windows, or MAC OS
- We provide a starter kit with a suite of tools
- Lots of tutorials exists

Next: Using the digital scopes

- Each group of 2-3 should share a digital scope
- Function generator to create wave form

Measure

- Period
- Frequency
- Peak to Peak

Quick Menu

- Groups common things
