with thanks to Charles Gammie
who first articulated many of the "why"s

Copyright © 2018 The Board of Trustees of the University of Illinois

In this talk, we'll look at the why
and how of adding references to a
manuscript...

Why?

How?

Why cite other people's work?

To give credit to others for their work

To prove your credibility and demonstrate your familiarity with the problem

To place an idea in context

To establish authority for a claim

To justify an assumption

To distinguish your work from that of others and show the novelty and significance of your contributions

Why cite your own work?

To get credit for your own work

To show how the work being reported is related to and builds on what you've already done

Why else do readers need references?

To evaluate the validity of your methods, your assumptions, and your conclusions

To be able to investigate an idea in greater detail

To be aware of alternative methods or conclusions

Be absolutely objective in citing references, even ones that don't agree with you and from people you don't like

“...a specific, extra type of integrity that is not lying, but bending over backwards to show how you may be wrong, that you ought to have when acting as a scientist.”

—Richard P. Feynman
Surely You're Joking Mr. Feynman!

Failure to cite fairly is called *selective citation* and is a breach of professional standards

What has to be cited?

“...as first shown by Newton, $F = ma$.”¹

Exception for “common knowledge”

BUT

“common knowledge” is context dependent
field and subfield
audience
venue

Should it be cited? Err on the side of generosity!

(particularly if the author is still alive...)

¹Isaac Newton, *Philosophiae Naturalis Principia Mathematica* (London, 1687).

Which citation?

**Cite original, not derivative work, if possible—
minimizes risk of misinterpretation or error in
the secondary source**

**Cite the final, peer-reviewed version, not the
preprint (*Phys. Rev. D*, not arXiv)**

Bad citation practices:

- Selective citation—incomplete, biased
- Citing inaccessible sources
- Citing papers you haven't actually read (!)
- Misrepresenting the cited paper
- Citing indiscriminately (the “core dump”)

“Literature references should not be tacked onto a manuscript ...instead, they need to be used with taste and judgment. Although some may consider references mere “window dressing”—something added to a manuscript to make it look scholarly—their misuse speaks loudly for itself...Such citations become annoying rather than illuminating.”

—Herbert B. Michaelson
How to Write & Publish Engineering Papers and Reports, 3rd ed.
(Oryx Press, 1990), p. 143.

Now we'll look at how to format those citations...

Rule #1—Journals have their own idiosyncratic rules

***Physical Review Letters*—**

[1] R.A. Smith, B.S. Handy, and V. Ambegaokar, *Phys. Rev. B* **63**, 094513 (2001).

***Semiconductor Science and Technology*—**

[2] Chen C H, Tang C W, Shi J, and Klubek K P 2000
Thin Solid Films **363** 327

***Astrophysical Journal*—**

McCullough, P. R., et al. 2006, *ApJ*, 648, 1228

***Science*—**

11. A. J. Leggett, *Phys. Rev. Lett.* **25**, 1543 (1970).

TIP: Read the “instructions for authors” that are printed in the journal

Basic reference style for physicists:

[1] G. Baym, D.H. Beck, and C.J. Pethick, “Transport in very dilute solutions of ^3He in superfluid ^4He ,” *Phys. Rev. B* **88**, 014512/9 pp. (2018).

If more than five authors, you may use F. Author et al., but get in the habit of putting all author names in your citation manager—you’ll need them for proposals

Use AIP style for books, theses, patents, computer codes, websites, reports, and unpublished materials

To title or not to title?

***Phys. Rev. Lett.*—**

[6] P. Nozières and D. Pines, *Phys. Rev.* **113**,
1254 (1959).

***Nature Physics*—**

9. Cronenwett, S. M., Oosterkamp, T. H. & Kouwenhoven, L. P.
A tunable Kondo effect in quantum dots. *Science* **281**, 540–
544 (1998).

TIP: Put titles and inclusive page numbers in your master bibliography—although you won't need them for most journal papers, you *will* need them for some papers, proposals, and other docs

Don't make up your own abbreviations of journal names

The *AIP Style Manual*, Appendix G* has nine pages (two columns each) of abbreviations for journal names; use 'em

Or consult

<https://library.caltech.edu/reference/abbreviations/>

Essential to use standard abbreviations so the bibliographic information is recorded properly in the citation indexes

*https://courses.physics.illinois.edu/PHYS496/Resources/AIP_Style_4thed.pdf

**The following styles* are used for
Phys Rev and other AIP journals:**

***Your discipline may differ; consult
your adviser on best practice**

Journal article

A. Bezryadin, C.N. Lau, and M. Tinkham, *Nature* **404**, 971
(2000).

Authors' names are presented

First initial.Middle initial.<space>Surname

Journal name is not italicized

Journal volume is bold face

**Issue numbers are not used (except when
needed, e.g., *Physics Today*)**

Publication year is enclosed in parentheses

Citation is followed by a period

Distinctions are made among journal articles

Published article—

J.M. Smith, Phys. Rev. B **75**, 15 (2007).

Accepted for publication—

J.M. Smith, Phys. Rev. B (to be published).

Submitted for publication—

J.M. Smith, Phys. Rev. B (submitted).

Erratum—

J.M. Smith, Phys. Rev. B **75**, 706(E) (2007).

AIP Translation journals—

J.M. Smirnov, Zh. Eksp. Teor. Fiz **51**, 165 (1966) [Sov.
Phys. JETP **24**, 11 (1967)].

Book

Edward R. Tufte, *Visual Explanations* (Graphics Press,
Cheshire, CT, 1997).

**No comma before opening parenthesis mark
Parenthetical information is publisher, city of
publication, and year of publication, in that
order**

Chapter in a book

R.B. Fuller, “Defects in MoGe thin films,” in *Point Defects in Solids*, eds. J.H. Crawford, Jr. and L.M. Slifkin (Plenum, New York, 1972), Ch. 2, pp. 103–150.

In U.S. usage—

Commas and periods go *inside* quotes

Semicolons and dashes go *outside* quotes

**Question marks and exclamation marks go
inside or outside, depending on whether the
mark is part of what is being quoted**

<http://people.physics.illinois.edu/Celia/MsP/QuotationMarks.pdf>

Paper in a proceedings

Published as a book—

R.B. Jones, in *Proc. of the Workshop on Nuclear and Dense Matter, Urbana, 1977*, eds. G.A. Baym and V.R. Pandharipande (University of Illinois, Urbana, 1978), p. 195.

Not published—

R.B. Jones, in *Proc. of the Workshop on Nuclear and Dense Matter, Urbana, 1977*, eds. G.A. Baym and V.R. Pandharipande (unpublished).

Shortened title—

R.B. Jones, in *Nuclear and Dense Matter*, proceedings of the Workshop, Urbana, Illinois, eds. G.A. Baym and V.R. Pandharipande (University of Illinois, Urbana, 1978).

Patent

Ghoshal; Uttam S., U.S. Patent No. 6,356,147 (March 12, 2002).

Thesis

D.L. Dalidovich, Ph.D. thesis, University of Illinois at Urbana-Champaign, 2001 (unpublished).

Computer Code

Chris Denend et al., computer code DREAMWEAVER, v. 4 (Macromedia, Inc., San Francisco, CA, 2000).

Website*

Theoretical Biophysics Group, "Organization of energy transfer networks in photosynthesis,"
<http://www.ks.uiuc.edu/Research/psres> (April 15, 2007).**

***Some editors will not accept URLs as references; NSF and NIH do not allow URLs in project descriptions for proposals**

****Good practice is to include the date the material was accessed**

Reports

Most reports are considered to be “unpublished”

R.E. Rowland, Argonne National Laboratory Report ANL/ER—3, 1995 (unpublished).

Those reports considered to be full publications should omit the (unpublished) designation at the end of the reference.

D.H. Lassila, B.P. Bonner, V.V. Bulatov, J.U. Cazamias, and E.A. Chandler, Lawrence Livermore National Laboratory Report UCRL-TR-202805, 2004.

How to cite unpublished sources

D.W. Hertzog, private communication.

H.R. Hughes, unpublished.

J. Kunkle, presented at the Undergraduate Research Symposium, Department of Physics, University of Illinois at Urbana-Champaign, Jan. 26, 2007 (unpublished).

TIP: Some editors will not accept papers that cite unpublished sources; use them very sparingly

Consult the journal for preferred style of number call-outs in the text

In-line

Square brackets [1]; space before the first bracket

Punctuation goes after [1], [3], and [5].

Multiple refs separated by commas [2], [4], [6].

Serial refs indicated by an en dash [7–10].

Superscript

No parentheses or brackets; no spaces¹¹

Punctuation goes *before*.¹²

Multiple refs separated by commas.^{13,14,15}

Serial refs indicated by an en dash.^{16–19}

Harvard referencing style

Call-outs are given by the last name of the author(s) and the date of publication

References are enclosed in parentheses unless the author's name is part of the sentence

“The α -model (Jones et al. 2004)...”

“According to Jones et al. (2004)...”

Items in the reference list are ordered alphabetically by the surname of the first author of each paper

Abel, T. 2002, *Science*, 295, 93

Yu, Q., & Tremaine, S. 2002, *MNRAS*, 335, 965

To recap:

Cite responsibly

**No one-size-fits-all for reference style;
read the directions**

**Put all author names, article titles, and inclusive
page numbers in your master bibliography;
you will need them eventually**

**Choose a citation manager* that will
accommodate a number of different
referencing styles**
